(54) Title: MEDICAL INFORMATION SYSTEM

(57) Abstract

A medical information system receives patient data and information from various sources and displays such information in a variety of formats for use by members of a medical team in a hospital, clinic, or office. The system (10) includes a primary display (12), and an associated display controller (14) and system storage device (16). The controller (14) is coupled to a primary interface unit (20). Keyboard and/or pointing device (22), scanner (24), audio input and/or output device (26) and printer (28) are all coupled by way of interface (20) to the display controller (14). Access to selected subsets of patient information is provided by user selection of specific data sets identified by job function selection icons. Multiple types of patient data are selectively displayed simultaneously, and to multiple remote users.
